For Immediate Release

Track File Use and Stop File Theft with ByStorm FileSure

ByStorm FileSure 2.0 adds Defense option. Premier file auditing software extended to prevent file misuse with simple rules

<u>**MAGNOLIA Texas, December 5, 2008 -**</u> ByStorm Software, LLC, announces today the immediate availability of FileSure version 2.0. FileSure provides best-in-class file auditing and data loss prevention, enabling Microsoft Windows administrators to identify who has accessed, modified, deleted, or renamed files. The new release provides a major "active defense" enhancement that enables complete access control for specific files, folders, or types of files. This can be accomplished on both servers and workstations.

With FileSure, administrators are able to precisely monitor and control the use of sensitive data within the organization. This protects against both inadvertent/accidental common actions and deliberate misuse of information assets and theft.

Our customers are able to protect patient data from being viewed by unauthorized personnel or copied to removable storage devices (USB, CD, DVD, etc.), attached to email, and shared via social networking sites such as Facebook.   A simple rules engine includes built-in support for common issues while permitting precision control for unique needs.

"Our customers saw what was happening to their data and asked for control," said Gene Allen, President of ByStorm Software LLC. "The response we have received from our beta customers has been deafening."

"I knew that FileSure was a winner just a few minutes after deploying it," said Joe McDaniel, Director of Information Services for the Arkansas Foundation for Medical Care. "Our compliance officer values the real-time display showing access of critical data and the defense rules in Versions 2.0 ensure that proprietary data remains private. It's the only thing we found that meets our needs."

About ByStorm Software:
        ByStorm Software, founded in 2003 and provides IT organizations with low footprint, yet comprehensive file auditing, data loss protection, and compliance enabling alerting and reporting for the Microsoft Windows platform. ByStorm Software is committed to ensuring that our customers are empowered to meet PCI, HIPAA, NERC/CIP, NIST, 21-CFR-11, SOX and other security and compliance mandates.
